

# Independent calibration and selective policy

Frozen P-CRA-U evidence is mapped to risk; action rules and the spatial region are separate downstream steps.

Calibration artifact: 1000 samples / 200 families; family 5-fold crossfit.

## Selective decision: rules are checked in this priority order

Observed v211iid\_family\_000007\_\_clean: p(INSUFFICIENT)=0.868, risk=0.815 → REOBSERVE (rule 3).

Test-IID: RoboRefer disagreement is unavailable; its missing indicator is active. The P-CRA-U calibrator has no source-specific threshold.
